Full Stack Engineer — Real-time systems & scalable backend architecture
Built real-time systems handling 10K+ events/min with sub-50ms delivery latency

SKILLS

Languages: JavaScript (ES6+), TypeScript, C++, Python, SQL, HTML5, CSS3
Backend: Node.js, Express.js, Redis, BullMQ, Socket.io, JWT, OAuth 2.0, REST APIs
Frontend: React.js, Next.js, Tailwind CSS, Vite, Responsive Design
Databases: MongoDB, Mongoose ODM, PostgreSQL, Redis, Supabase
DevOps & Tools: Git, GitHub, Docker, CI/CD, Vercel, Render, Postman, Jest, Swagger/OpenAPI

PROJECTS

CollabDocs — Real-Time Collaborative Editor | *Next.js, Node.js, TypeScript, Socket.IO, Y.js, MongoDB, Redis*
github.com/imsumit28/CollabDocs | collabdocs2026.vercel.app

- Built CRDT-based collaborative editor enabling conflict-free multi-user editing with <100ms sync latency
- Implemented real-time sync via Socket.IO with Redis pub/sub adapter, enabling horizontal scaling across server instances
- Integrated Groq AI writing assistant (Llama 3.3 70B) with rate limiting; added JWT + Google OAuth with HttpOnly cookies
- Authored 45+ Jest test cases (~60% coverage); documented 25+ REST endpoints via Swagger/OpenAPI

Curlix — Production-Grade URL Shortener | *React.js, Node.js, Express.js, PostgreSQL, Redis, BullMQ*
github.com/imsumit28/Curlix | curlix.vercel.app

- Architected URL shortener with sub-10ms redirects via Redis cache layer in front of Supabase PostgreSQL
- Decoupled analytics from the redirect hot path using BullMQ async queue with 3-retry exponential backoff
- Implemented zero-account auth via bearer tokens, tiered Redis rate limiting, and Cloudflare Turnstile bot protection

NotifyX — Distributed Real-Time Notification System | *Node.js, Express.js, BullMQ, Redis, MongoDB, Socket.io*
github.com/imsumit28/NotifyX

- Engineered async notification platform with BullMQ job queue (5-retry exponential backoff) and Dead Letter Queue with replay
- Eliminated duplicates via two-layer idempotency (Redis SETNX + MongoDB sparse unique index); sub-50ms delivery latency
- Designed sliding-window rate limiting (10K req/min global, 50/min per user) and 30s batch grouping of repeated actions

DevConnect — Real-Time Social Platform | *React.js, Node.js, Express.js, MongoDB, Socket.io, Cloudinary*
github.com/imsumit28/DevConnect | devconnect2026.vercel.app

- Built full-stack social platform with real-time chat serving 50+ concurrent users with sub-100ms message delivery
- Designed 12+ RESTful API endpoints with MongoDB aggregation pipelines and Cloudinary media management

EXPERIENCE

Full Stack Developer Intern

05/2026 – 07/2026

EncodersPro Private Limited, Noida, India

- Built 3+ React.js components and Node.js REST API endpoints in a 6-member Agile/Scrum team, reducing bug backlog by 20%
- Participated in sprint planning, daily stand-ups, and peer code reviews; managed Git workflows and CI/CD pipelines

EDUCATION

B.Tech, Computer Science & Engineering (AI & ML)

08/2024 – 05/2028

Vellore Institute of Technology (VIT), Bhopal, India

CGPA: 8.03/10.0

Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Object-Oriented Programming

Certifications: Applied Machine Learning in Python – Coursera (University of Michigan) | JavaScript (Intermediate) – HackerRank
